EXPENSES AND CHARGES DATED SEPTEMBER 19, 2017

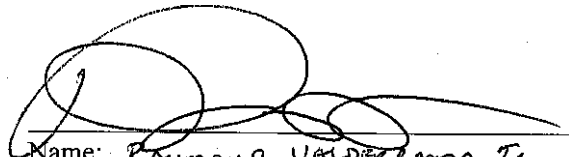

I, Mauro Vilh-O'Dell, declare as follows:

1. I am an authorized signer for U.S. Bank Trust National Association, as Trustee of the SCIG Series II Trust, by and through its servicing agent BSI Financial Services, Inc. ("Respondent"), and I am familiar with Respondent's business records relating to this loan account.

Abstract

The purpose of this study was to examine the effects of a 6-week training program on the physical fitness and health-related quality of life (HRQL) of sedentary elderly women. The subjects were randomly assigned to either a control group or an exercise group. The exercise group performed a supervised aerobic and resistance training program three times per week. The control group did not participate in any structured exercise program. Physical fitness measures included maximum oxygen consumption ($\dot{V}O_{2\max}$), peak power output (PPO), and peak heart rate (HR). HRQL was assessed using the SF-36 questionnaire. The results showed that the exercise group had significantly higher values for $\dot{V}O_{2\max}$, PPO, and HR compared to the control group at the end of the 6-week program. Additionally, the exercise group showed significant improvements in several HRQL domains, including physical functioning, role limitations due to physical problems, bodily pain, general health perceptions, vitality, and social functioning. These findings suggest that a 6-week supervised exercise program can effectively improve both physical fitness and HRQL in sedentary elderly women.
